

**DEPARTMENT OF ORAL
MEDICINE & RADIOLOGY**

- **Oral medicine** is a specialized discipline within dentistry that focuses on provision of dental care for medically complex patients, and the diagnosis and management of medical disorders involving the mouth, jaws and salivary glands including oral manifestations of systemic diseases. The latter include gastrointestinal, dermatological, rheumatological and haematological diseases, autoimmune and immunodeficiency disorders and the manifestations of neurological or psychiatric disease. Oral medicine is a bridge between medicine and dentistry.
- Oral and maxillofacial Radiology is the specialty of dentistry and discipline of radiology concerned with production and interpretation of images and data produced by all modalities of radiant energy that are used for diagnosis and management of diseases, disorders and conditions of the oral and maxillofacial region.
- Our department is well equipped with all the latest diagnostic tools used for diagnosis of dental diseases as well as mucosal lesions involving precancerous lesions and conditions. We train the graduate students in diagnosing, investigating and treatment for oral mucosal lesions, tumors, oral manifestations of systemic diseases along with training in radiographic imaging principles and techniques and its interpretation, palliative care.

AIM OF THE DEPARTMENT

- To train the dental graduates of this institution to acquire adequate knowledge, necessary skills and attitudes required for carrying out all the activities appropriate to diagnosis, investigations and treatment plan.
